Coronavirus can make people feel sick. Someone who has Coronavirus can have a fever, a cough, sore throat, feel tired and can find it hard to breathe.

Someone with a Fever will feel hot or cold. Every day my support worker will use a thermometer to check if I have a fever.

If I cough or a sneeze I can cover my mouth using a tissue, hanky, or my arm to cough or sneeze in to.

If I feel sick I can tell my support worker. My support worker will call my doctor or nurse.

I might have to meet with my doctor or nurse at my home. I might have to go to my doctor's office and meet them. I may have to go to hospital if I'm feeling very sick.

If I am sick I might have to wear a facemask until I am better. This will help others not to get sick. Other people who support me may also wear facemasks, gloves and aprons.

If I get sick, the doctor might need to do some tests. The doctor can rub a stick in my mouth and nose.

The doctor or Nurse will tell me what I need to do if I feel sick. I might be told I have to stay in my bedroom for 2 weeks.

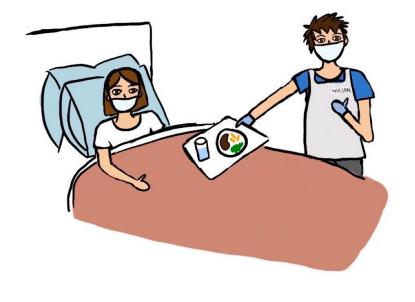

I will have to stay in my bedroom so other people do not get sick. I will not be able to use other areas in my house.

My support staff will give me food and help me if I have to stay 2 weeks in my bedroom

These are some things I can do if I have to stay in my bedroom: (eg phone calls, emails, games, ipad, tv toys etc)

11.

Tracking the 14 days in isolation							
Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	
Day 8	Day 9	Day 10	Day 11	Day 12	Day 13	Day 14	
,		,	,	,	,		

These are some activities I can do w well and have to stay in my bedroom	_

13.

It will feel like I am waiting a long
time to get better. I can chat with:

I will be looked after by support staff and doctors. Soon I will feel better.
